- serious video

Mar 30 - 12:18

**enamel**-the hard white coat that covers our teeth.

**dentine**-underneath the enamel is the dentine. It is not as hard as the enamel.

**pulp cavity**-in the centre of the tooth is the pulp cavity. This contains the blood vessels and nerves. The blood brings food and oxygen to the living part of the tooth. The nerves feel the pain, especially when a tooth decays.

**cement**- the root of the tooth has a covering. This is called the cement. It fixes the tooth to the jaw bone.

**plaque**- is a thin layer of sticky substance on the surface of the tooth. The bacteria in plaque feed on sugar and cause acid to form. This acid attacks the enamel and causes tooth decay.

Mar 30 - 12:17

### Talking partners

Why should we look after our teeth?

How can we look after our teeth?

What should we do?

How can we stop tooth decay?

Mar 30 - 12:28

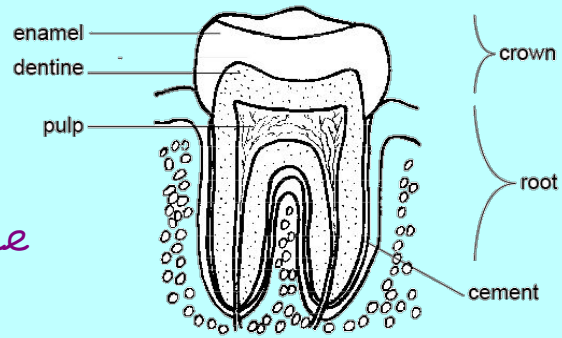

WALT: understand what can damage our teeth and how to look after them.

What happens if we do not look after our teeth?

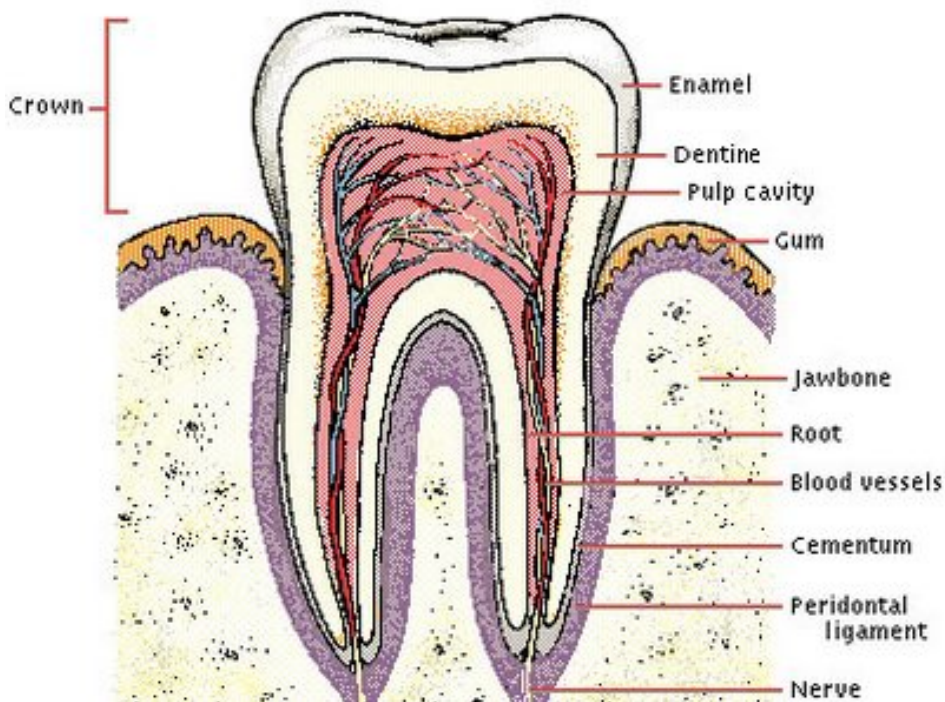

Explain by circling the part of the tooth that gets damaged and the part that feels the pain when the tooth is damaged.

Finish by explaining how we can look after them.
